

The first contra-angle handpiece with reciprocating motion

21 March 2017

MUNICH, Germany: Endodontic specialist VDW presents an important innovation to dentists the 2017 International Dental Show (IDS): the world's first contra-angle handpiece with integrated reciprocating motion. With **RECIPROC® direct**, VDW now presents an easy first step in using reciprocating motion for European dentists. Dental professionals in South America and Asia have been very successfully using **RECIPROC® direct** since 2015.

No reciprocating file without a good motor: VDW's extensive portfolio of innovative motors with reciprocating motion has now been expanded with **RECIPROC® direct**. With it, dentists can begin canal preparation in just a few steps: the handpiece can easily be clicked onto the existing motor on the treatment unit, as the reciprocating motion is integrated into the contra-angle handpiece. It could not be simpler! **RECIPROC® direct** makes it easier to switch to modern reciprocating motion for root canal preparation, owing to its attractive entry-level price.

RECIPROC® direct is therefore the perfect addition to VDW's range of endodontic motors, which includes the tried-and-tested VDW.GOLD RECIPROC®, VDW.SILVER RECIPROC® and, above all, the wireless VDW.CONNECT Drive®.

Encounter RECIPROC® direct and all the other VDW endo motors at IDS 2017. Visit VDW in Hall 10.1 (Booth B050–C051) or at www.vdw-dental.com.
